

Assignment 12.4 (H) Len or nlen?

[5 Points]

The following functions are defined:

```
let rec nlen n l = match l with [] -> 0
  | h::t -> n + nlen n t

let rec fold_left f a l = match l with [] -> a
  | h::t -> fold_left f (f a h) t

let rec map f l = match l with [] -> []
  | h::t -> f h :: map f t

let (+) a b = a + b
```

Show that the statement

$$\text{nlen } n \text{ l} = \text{fold_left } (+) \text{ 0 (map (fun _ -> n) l)}$$

holds for arbitrary l and n . Assume that all expressions do terminate.

Suggested Solution 12.4

We have to prove the more general statement:

$$\text{acc} + \text{nlen } n \text{ l} = \text{fold_left } (+) \text{ acc (map (fun _ -> n) l)}$$

We do so by induction on the length k of list l .

- Base case: $k = 0$, so $l = []$

$$\begin{aligned} & \text{acc} + \text{nlen } n \text{ []} \\ \stackrel{\text{nlen}}{=} & \text{acc} + \text{match [] with [] -> 0 | h::t -> n + nlen n t} \\ \stackrel{\text{match}}{=} & \text{acc} + 0 \\ \stackrel{\text{arith}}{=} & \text{acc} \\ \stackrel{\text{match}}{=} & \text{match [] with [] -> acc | h::t -> fold_left } (+) ((+) \text{ acc } h) \text{ t} \\ \stackrel{f.l}{=} & \text{fold_left } (+) \text{ acc []} \\ \stackrel{\text{match}}{=} & \text{fold_left } (+) \text{ acc (match [] with [] -> []} \\ & \quad | h::t -> (\text{fun _ -> n}) h :: \text{map (fun _ -> n) t}) \\ \stackrel{\text{map}}{=} & \text{fold_left } (+) \text{ acc (map (fun _ -> n) [])} \end{aligned}$$

- Inductive step: We assume the statement holds for a list $l = xs$ of length $k \geq 0$.

Now, we prove it for $l = x :: xs$:

```
acc + nlen n (x::xs)
 $\stackrel{nlen}{=}$  acc + match x::xs with [] -> 0 | h::t -> n + nlen n t
 $\stackrel{match}{=}$  acc + n + nlen n xs
 $\stackrel{I.H}{=}$  fold_left (+) (acc + n) (map (fun _ -> n) xs)
 $\stackrel{(+)}{=}$  fold_left (+) ((+) acc n) (map (fun _ -> n) xs)
 $\stackrel{match}{=}$  match n::map (fun _ -> n) xs with [] -> acc
      | h::t -> fold_left (+) ((+) acc h) t
 $\stackrel{f.l}{=}$  fold_left (+) acc (n :: map (fun _ -> n) xs)
 $\stackrel{fun}{=}$  fold_left (+) acc ((fun _ -> n) x :: map (fun _ -> n) xs)
 $\stackrel{match}{=}$  fold_left (+) acc (match x::xs with [] -> []
      | h::t -> (fun _ -> n) h :: map (fun _ -> n) t)
 $\stackrel{map}{=}$  fold_left (+) acc (map (fun _ -> n) (x::xs))
```
